# 1. Executive Summary

FeedOracle is a B2B data infrastructure provider delivering blockchain sustainability data to regulated institutions. Our DAP protocol provides cryptographic proof of data delivery for regulatory workflows.

## The Opportunity

MiCA Article 66 requires 10,000+ CASPs to disclose sustainability information. Similar regulations emerging in UK, Singapore, Japan.

## Our Solution

54+ networks, verified sources (Cambridge, CCRI, DNV), DAP anchored on 4 chains.

## 2. The Problem

### Regulatory Pressure

MiCA requires sustainability disclosure for all crypto-assets. Non-compliance carries significant penalties.

### Data Fragmentation

Blockchain sustainability data scattered across papers, reports, databases. No single API source.

### Verification Gap

Traditional data delivery lacks provenance. Auditors cannot verify what data was received or when.

# 3. DAP Protocol

Cryptographic proof of data delivery, timing, and integrity.

## How DAP Works

- \* SHA-256 Response Hashing
- \* Hourly Merkle Aggregation
- \* Multi-Chain Anchoring (4 chains)
- \* Independent Verification

Deployed: Polygon, Base, Arbitrum, Ethereum - all live

# 4. Technology Architecture

Four-layer data infrastructure:

Layer	Function
4: Attestation	DAP multi-chain anchoring
3: Disclosure APIs	MiCA/CSRD formatting
2: Indicators	Normalized metrics
1: Raw Data	Third-party aggregation

## Data Sources

Cambridge CBECI, CCRI, DNV, Solana Foundation + 47 calculated

# 5. Market Opportunity

MiCA creates mandatory demand. 10,000+ EU CASPs require compliance.

Segment	Size
EU CASPs	10,000+ entities
Global Exchanges	500+ platforms
Asset Managers	EUR 50T+ AUM
RegTech	200+ vendors

Global expansion: UK FCA, Singapore MAS, Japan JFSA

# 6. Business Model

## Subscription-Based SaaS

Tier	Price	Features
Free	EUR 0	100/day, calculated
Developer	EUR 49	10K/mo, verified
Professional	EUR 299	100K/mo, full DAP
Enterprise	Custom	Unlimited, SLA

Unit Economics: 85%+ gross margin, LTV:CAC >10:1

## 7. Competitive Advantage

### Structural Moat: DAP Lock-In

Attestation history anchored on-chain. Switching = losing compliance trail.

Feature	FeedOracle	Others
Networks	54+	5-10
API	Yes	No
Attestation	4-chain DAP	None
Price	EUR 299/mo	EUR 5000+

# 8. Roadmap

Timeline	Milestone	Status
Q4 2025	Platform launch	Done
Q1 2026	DAP v1.0	Done
Q2 2026	UK FCA format	Planned
Q3 2026	Partner program	Planned
Q4 2026	Japan JFSA	Planned

# 9. Investment Highlights

- \* Regulatory tailwind: MiCA mandatory demand
- \* First-mover: Only multi-chain attestation
- \* Lock-in: 10+ year customer relationships
- \* Scalable: High-margin SaaS model
